

## Streamline forms management with the new FormMaker 4.0 PRO

*Form creation and administration - now available for all Kyocera devices with WiseCore technology.*

**Stuttgart, June 15, 2010 - FormMaker is still one of the most powerful form management solutions on the market and has now been revised.**

By the end of May, the new FormMaker 4.0 PRO is available and supports all permanent storage media of the new generation of the Kyocera devices, which are equipped with WiseCore technology. Of course, all media of older devices are supported as well. All interested parties, who do not know the product yet, can test a free demo version which is available for download on [www.ccp.de](http://www.ccp.de).

For many years FormMaker has been successfully used and proven by many customers that have optimized their output management with FormMaker.

This solution allows you to create forms in your familiar Windows environment in a fraction of the time which was required before. You can manage and modify the forms and store them as PRESCRIBE<sup>®</sup> macros in printer or multifunction device without any programming knowledge. The administrative functions allow forms and macros to be updated on all printers connected to the network by a few simple mouse clicks. Administrative effort can be reduced by more than 90 %.

Our software solution is designed for every possible field of application. You can use the FormMaker in a small company with a manageable number of forms easily and economically. You can create forms as a service to your customers and adopt them in their environment to the appropriate printer. It's also of interest for big enterprises. There you can manage a group of up to 65,000 different forms in a single project file.

With FormMaker the user receives an easy and intuitive tool which allows the creation of all kinds of documents and forms, because with this management and graphics software it is a cakewalk to create forms directly on the screen (WYSIWYG). After

completing the design FormMaker converts the forms automatically into PRESCRIBE® commands which can be stored directly in the printer or multifunction device.

FormMaker offers plenty of time-saving features and a variety of thoughtful and easy-to-use design tools that allow you to translate even complex forms or complicated logos instantly and automatically into optimal PRESCRIBE® code:

- Sophisticated drawing tools
- Extensive functions for text editing
- Interactive and automatic transfer of scanned documents
- Integrated symbol libraries for frequently used graphic elements
- Colour palettes and patterns
- Several ready-made templates and customizable work environments
- 18 Import / Export Filters
- Numerous additional modules e.g. bar code, text tables, form options

The individual elements are stored as "items" and can then be used in different forms. Changes of a telephone number or a contact, have to be updated only once in the corresponding item. And all the forms that use this item are automatically updated company-wide with a few mouse clicks. This approach significantly reduces the complexity of the management and change effort.

Another effect: You store the forms in the printer and send only the variable content data over the network. An integrated PRESCRIBE® command sequence detects the appropriate form in the output device, fills the print data into the desired form and prints it on simple blank paper, so that all costs incurred in the use of pre-printed forms are obsolete.

This leads to further long-term savings: No expensive pre-printed forms, no stock and no administrative costs. According to a Dataquest study 12.5 billion pre-printed forms are produced worldwide per year and there are many efforts to contain these costs. FormMaker offers one of the most effective savings, because in combination with FormMaker the benefits of Kyocera PRESCRIBE are fully utilized.

With FormMaker customers and service companies of all industries and sizes are capable of solving substantial output management issues.
