

CUSTOMER INDIVIDUAL SOFTWARE SOLUTION FOR EKB

Automated invoice printing and distribution

The customer:
EKB Container Logistik GmbH & Co. KG
Industriestraße 34
28199 Bremen/Germany

:: THE TASK ::

EKB CONTAINER LOGISTIK - based in Bremen - offers national and international container transport and logistic services.

Approximately 500 to 700 invoices, collective invoices and credit notes were printed daily on two matrix printers, sorted manually and then distributed to the branches in Bremerhaven and Hamburg using a courier service.

For cost savings standard A 4 paper was to be used instead of endless forms, the time-consuming manual sorting and the distribution via courier were to be dispensed with completely. The whole process of printing and distributing was to be controlled with a simple click and to be administered flexibly.

:: THE CCP SOLUTION ::

Our concept "Application on Request" enables the creation of customer individual solutions, based on the patented JScribe technology. These solutions do not call for any changes to be made within the customer's IT infrastructure and therefore can be used within an extremely short timeframe.

The solution realized for EKB is based on two tried and tested components, JScribe Application Server (JAS) and FormMaker.

The so called Analyzer of the JAS is able to scan print data streams for key words and trigger workflows accordingly.

At EKB any print data streams not containing the words „invoice“ or „credit note“ will pass by the analyzer on its way to the standard printer.

Invoices and credit notes are sorted according to pre-defined criteria and then passed on directly to the laser printers in the branch offices, including any number of copies needed.

The whole system is administered using two simple XML documents, the customer is able to make any necessary changes (add or change printers or locations, define input and output trays, extend the number ranges etc.)

The system is almost completely independent of further service from day one and can be administered by the customer to a very large extent.

:: EFFICIENCY OF THE SOLUTION ::

Wolfgang Hesse, head of EKB's IT department, is very content with the solution.

"CCP has realized our requirements with an easy-to-use system. Printing the invoices directly in the branch offices results in considerable time savings in dispatching the invoices to our customers and therefore leads to an accelerated receipt of the payments. We can also do without the courier service's costs. It is very likely that the CCP solution will amortize in less than 3 years."

:: APPLICATION ON REQUEST ::

For any question concerning customer individual software please contact CCP's project manager, Rudi Forster.
